

Accelerate Any-to-Any Health Data Integration

Innovation continues to disrupt and transform healthcare. Advancements in consumer engagement, value-based care, and care coordination models make the need to access and use data more critical than ever.

These advancements create opportunities to enhance workflows inside and surrounding the EHR which accelerates the need for confident and rapid data exchange.

Seamless and Secure Integration

Lyniate Envoy makes your most difficult integrations happen fast. Using proven technology and expertise, Lyniate Envoy enables patient data integration from any source to any destination, in any format. Whether it's for a single pilot or scaling to hundreds of integrations. Instead of investing in specialized integration resources, Lyniate's deep expertise solves this, so your team can focus on other key initiatives.

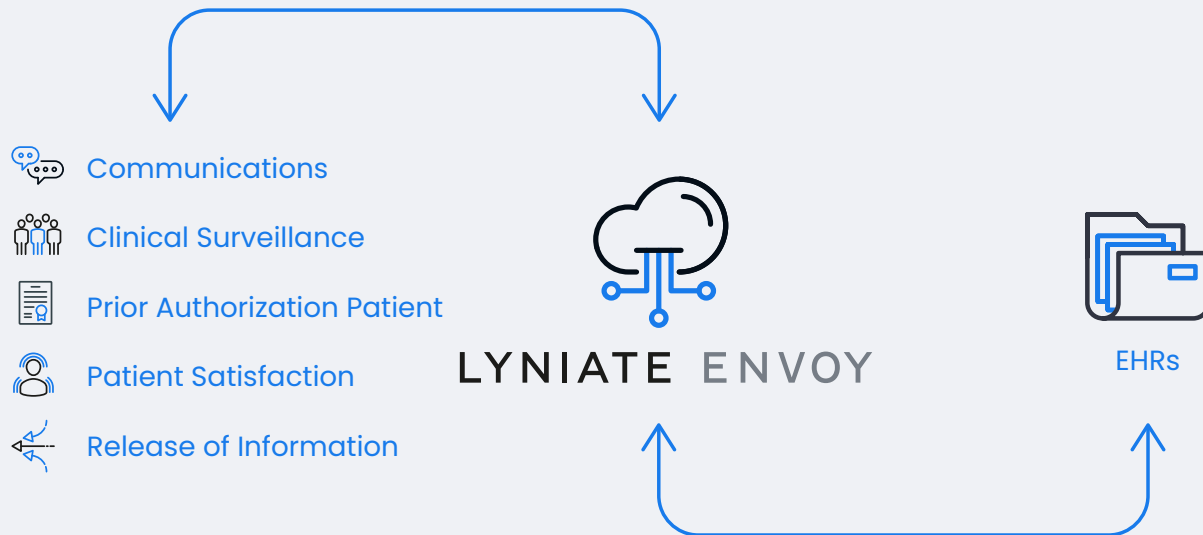

"Lyniate appealed to us because it was quick and easy to integrate with our software. It allowed us to obtain the unverified order information from EHR providers, and that's key to providing health systems with an effective telepharmacy solution."

Sean Parsons
Senior Solutions Architect PipelineRx

Successful Integrations with EHRs

LYNIATE ENVOY

EHR integration experts

Lyniate has extensive experience solving healthcare integration problems built on a deep understanding of EHR workflows along with cutting-edge automation of cloud infrastructure security, devOps processes, and interface engines – all built on a solid foundation of continuous HIPAA compliance.

What we offer

Interface Build & Configuration

We transform HL7 messages into JSON or FHIR messages to keep information standard across implementations.

Project Management

Our dedicated team helps you manage timelines, create project plans, and track deliverables.

Setup & Maintenance

Lyniate's engineers build, configure, test, and maintain VPN connections to allow for data transmission.

Use Cases

Lyniate's any-to-any EHR integration approach helps a variety of solutions across the entire spectrum of healthcare, such as:

- Population Health
- Patient Engagement
- Patient Record Outcomes
- Prior Authorization
- Telehealth
- Consumer Engagement
- Clinical Decisions
- Support Communications
- Release of Information
- Supply Chain Optimization
- Claims Processing & Audit Tracking Solutions
