

Leave the dragon slaying to others

Embarking on a quest to go live that requires interoperability? Compare using a one-size-fits-all, prebuilt solution with a fully managed interoperability service to see which path is right for you. From paperwork to production, fully managed services keep you from getting scorched and help you reach your go-live faster.

Planning

Write a project plan to keep everything on track.

✓ Sign paperwork and approve a plan.

! So many details, so little time.

Reconciling standards

Work with the healthcare organization to obtain sample HL7/CCD messages and associated data. Share your sample JSON and/or your API with the healthcare organization.

✓ Share sample JSON and/or API with your interoperability partner. Let them coordinate with your customer.

! Coordination between multiple parties requires the art of translation and lots of time.

Infrastructure

Build a data exchange infrastructure that works for you and your healthcare customer.

✓ Receive regular updates from your partner on the build while you use your time for other goals.

! Work on the build delays other projects. You and your customer need the integration in place.

Interfaces

Develop four sets of endpoints for: your solution, the EHR, the interoperability engine, and any APIs.

✓ Set up endpoints for your API. Your partner handles the rest.

! More endpoints mean more potential problems.

Tests

Work with your healthcare customer and your own technology to send test messages and troubleshoot problems.

✓ Send test messages from your solution/API and check that you received incoming messages. Your partner fixes messages and mapping. You maintain control of any issues with your API.

! Unexpected problems cause fire drills.

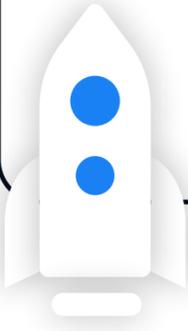

Go-live

Manage migration to production, last-minute and every small detail.

✓ Start exchanging data with your healthcare customer thanks to a smooth go-live managed by your partner.

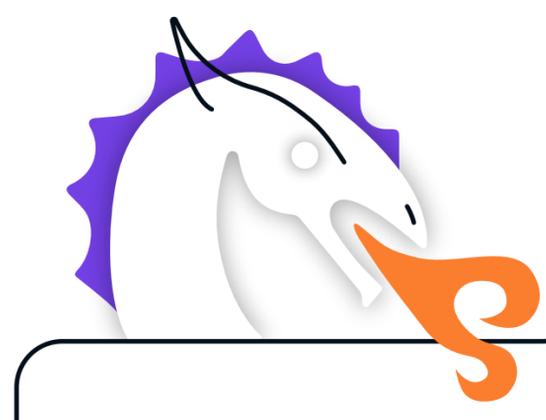

! Again... so many details, so little time. Plus, now your reputation is on the line.

Ongoing

Prepare to go through the entire go-live process again every time you need to connect with new data sets or new customers. You monitor every interface you build.

✓ Connect as needed with new data sets and customers. Your partner monitors each interface but gives you full visibility into every connection.

Ready to connect, compete, and grow?
