

Partnering with Lyniate HealthTerm® during the COVID-19 Pandemic

The COVID-19 pandemic has brought a new set of terminology challenges. The HealthTerm platform simplifies and streamlines a terminology solution to provide accurate and reliable results.

HealthTerm can be easily integrated into your existing applications or used as a stand-alone terminology management solution

COVID-19 and HealthTerm

The COVID-19 pandemic has impacted the patient population as well as the healthcare IT ecosystem. New challenges arise daily to identify and track testing and diagnosis for the virus, associated conditions, and syndromes.

COVID-19 has created an environment where it is paramount that terminology management be rapid and accurate for the safety and efficacy of healthcare.

HealthTerm makes the identification and grouping of COVID-19 codes simple and customizable by organization and/or use case.

Interested in learning how HealthTerm supports your unique needs for COVID-19 identification and reporting?

HealthTerm enables you to:

- Create a specific group of LOINC codes to populate a dropdown
- Create a specific group of codes across ICD-10, LOINC and CPT® for public health reporting
- Create a specific group of ICD-10 codes for display in a clinical viewer to indicate high-risk COVID-19 patients

The subsets created in HealthTerm are easily updated with a quick click of a button as new content and/or criteria is identified. All subsets are versioned and maintain history.
